MODULAR HOUSE

The modular house is a movable and reusable building product. Adopts modular design and factory prefabrication production. It uses the structure frame as the basic unit and can be used alone. It can also be used through different combinations of horizontal and vertical directions to form a spacious use space. The vertical direction can be stacked with 3 layers.

The modular house unit structure is a standard component welded with special steel and connected by bolts. Its structure is stable, easy and fast to install, and is favored by most users.
